Duraflex has developed a unique diving board cover that gives improved protection to the Duraflex board and will help maintain board performance and longevity.

PERFORMANCE THROUGH PROTECTION

Water & UV Resistant

Fits all Duraflex boards/stands

Tear resistant

Color/logo customization

Introducing the Duraflex Board Cover

It's not only divers who test the durability of our boards, exposure to weather, UV damage and general elements can all shorten the life of a diving board.

Duraflex has developed a unique diving board cover that gives improved protection to the Duraflex board and will help maintain board performance and longevity.

Designed for both indoor and outdoor use, the Duraflex Board Cover is made from a water and UV resistant material that helps keep the board clean and reduces the maintenance required.

The cover has an elastic front end and tear resistant material to ensure a tight fit for the tip end of the board. Secured with robust clip straps at the back of the board, once in place, the board will be protected from the elements. The Duraflex Board Cover also prevents people from using the diving board without authorization or appropriate supervision.

Customize your cover

With a focus on personalisation, the Duraflex Board Cover can be customized and is available in a range of colors along with the opportunity for Team and Venue logos to be applied.

The Duraflex Board Cover is an essential piece of equipment that helps venues protect their Duraflex diving boards and will give divers confidence in the board performance for longer.

Features

- Water & UV Resistant
- Tear resistant material
- Fits all Duraflex boards and stands
- Color and logo customization

Benefits

- Reduces weather and UV damage
- Improves board life span
- Keeps the board clean
- Reduced board maintenance
